

Integration Day Presentations will take place in the week 23 - 27 September 2019. Please find in the table below the scheduled times for the teams to present. The main purpose of this event is to see “whether the marshmallow is on top” (please watch the lectures if you are unsure what this means). We understand that it will sometimes be difficult for all team members to attend. Please try to make this happen, but the minimum we require is two team members per team. If no or only one team member shows up, all members will get zero marks.

Note that the timeslots were allocated randomly.

Marking Guide

All labs combined are worth 10% of your overall mark for SWEN 225.

All team members that have made some commits will get the same mark, team members who have not committed will get 0.

Commits always refer to commits to the assigned gitlab repository.

- 0: No attendance, no commits, or only one team member attends or there is no code to show. Also see notes above.
- E: There are commits and some relevant code, but there is no executable or regression test that shows any functionality.
- D: There are commits by two or more team members and some relevant code, and there is either an executable that draws the game board, or test cases to check game logic. The game board does not have to respond to user events.
- C: There are commits by three or more team members, and there is either an executable that draws the game board, or test cases to check game logic. The game board does not have to respond to user events.
- B: There are commits by three or more team members, and there is either an executable that draws the game board, or test cases to check game logic. The game board responds to user events.
- A: The repository has commits by all team members. There are test cases to check game logic *and* a working stable playable prototype that allows game play with one or many of the following limitations:
 - the advanced components are missing
 - only level one is implemented
 - the game timeout functionality is missing.
